Challenge

Solution

Large sanctuaries require architectural and performance lighting with professional quality and features, as well as the flexibility to address everything from weekly services to dramatic productions, concerts, speaking events, and more.
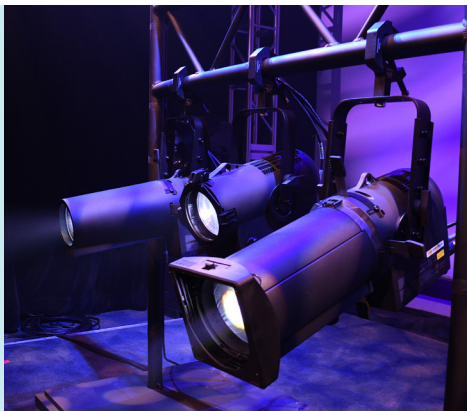

An integrated solution from Vari-Lite provides houses of worship with flexible sanctuary lighting that can be easily adjusted for any style of event.

In addition to theatrical and effects lighting, large sanctuaries often use lighted scenic elements such as video walls and environmental projection systems, so the lighting must have the output to be visible in an environment where technology can create a lot of ambient light.
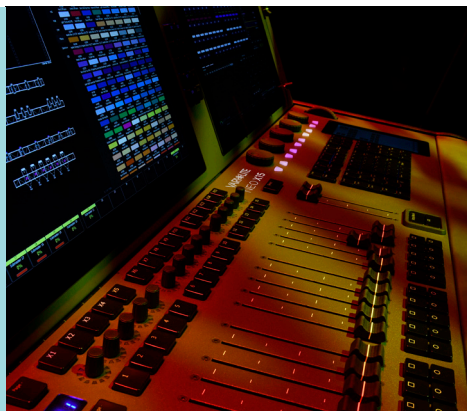

The excellent output and premium features in Vari-Lite's Broadway and West End Series theatrical fixtures, VL1600 Profile theatrical moving head, and VL800 EventWash ensure you have the right look for every moment, no matter what else is happening on stage.

Thanks to the variety of concerts, holiday services, and other special events in the sanctuary, most of which are streamed alongside the weekly services, lighting needs to be camera ready, with the ability to mount fixtures in more locations.

With our network-based control distribution solutions, fixtures can be mounted wherever you need, while the excellent light quality and a wide color range in our luminaires ensures everyone is seen clearly on stage and on screen.
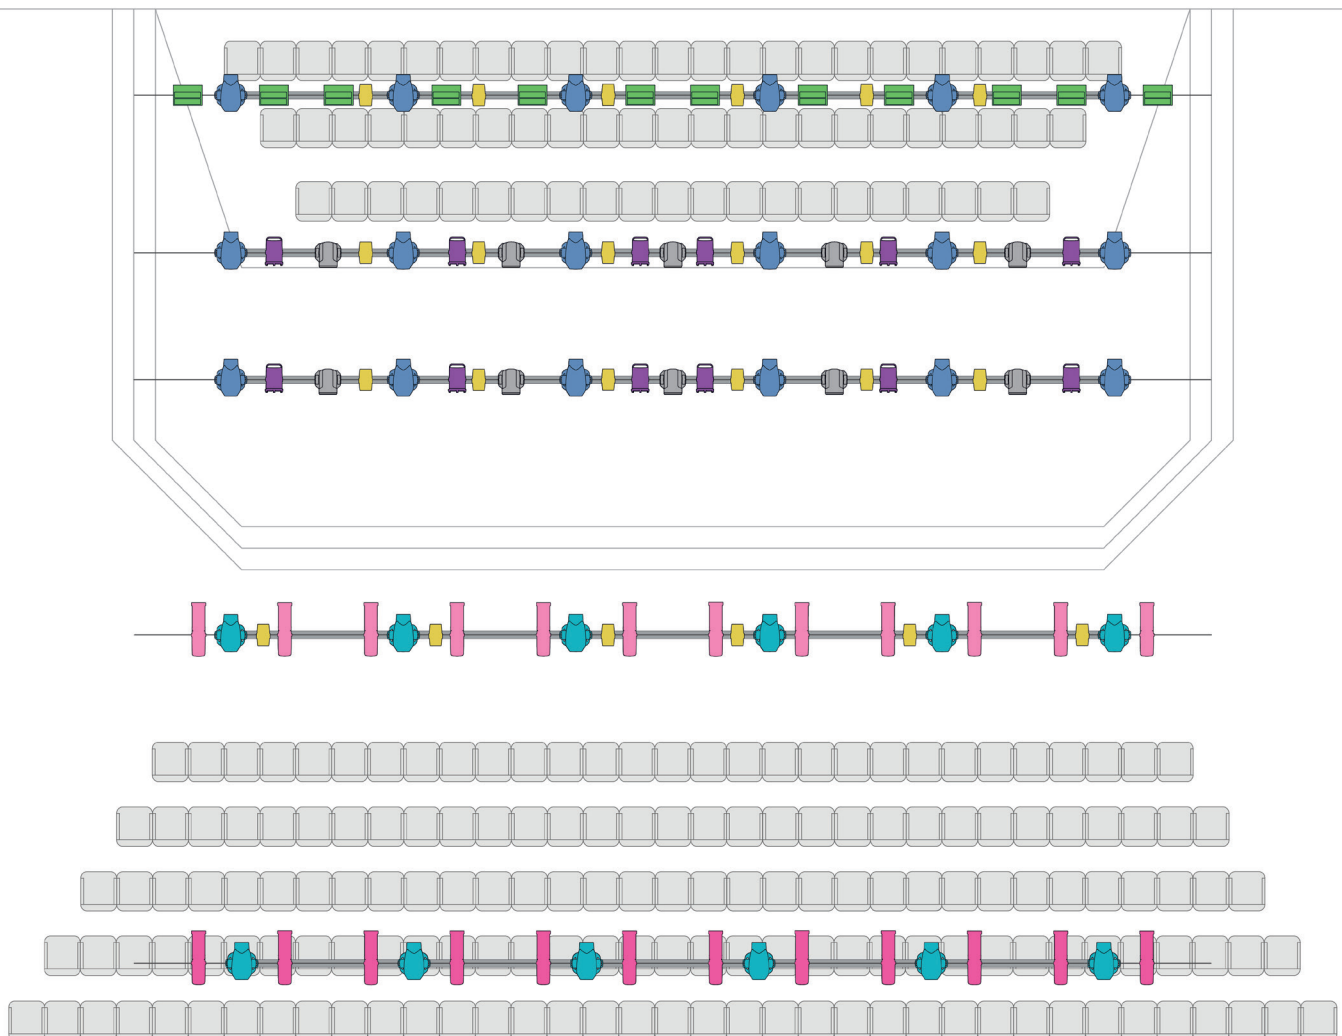

While professional operators may run the lighting during the weekly services, smaller events and rehearsals are often operated by volunteers or church staff, meaning the control solution should be powerful yet intuitive.

The advanced features of the powerful Neo X15 Console give the look you need to your services and events, while the intuitive Vision.Net control system allows novice users to run stage and house lighting with minimal effort.
